Cleo Dashboards™

The Right Visibility for the Right Audience

Within any organization, different departments need different information about data flows in order to make informed and intelligent business decisions. For example, while IT may focus on ensuring the data pipes are open and flowing, a business user is worried about whether the order from their largest customer came in accurately and on time.

Whether you need visibility into summary information on file movement or detailed information on the status of a file from your most important customer, Cleo Dashboards provide the visibility you need to power your business.

Even though analysts estimate that downtime can cost organizations $100,000 or more per hour, it is often difficult or, in some cases, nearly impossible to get "good" information about the data flows that power your business.

Visibility Made Easy™

Users can view the information they need in a clean, easy-to-use dashboard format that can be easily customized and tailored. Cleo Dashboards come with a library of prebuilt templates that allow users to start viewing data immediately.

View Transfer Information

Track summary and detail information related to data flowing through your organization. Filter on key categories including trading partner, host folder, and file direction to zero in on the information you need. Gain visual representation of file movements and checkpoints, such as age of file and date the file was received or transferred, including the ability to drill down on any items that may impact the business. Filter on trading partners or host folders and see your top trading partners and their activity via an easy to understand screen.

View Detail Reports

View detailed reports that allow you to focus on the details that matter to you most, including start time, end time, status, direction, protocol, file name, file type, file size, tracked type, and run type, as well as common EDI details including interchange, functional group, transactional number, control number, message type, data segment count, and acknowledgment status.

View SLA/KPI Reports

Managing to Service Level Agreements (SLAs) can improve your business performance and help influence decisions on who to buy from and sell to. Key Performance Indicators (KPIs) can help you monitor and report on how trading partners track against the performance indicators that mean the most to your business. With Cleo's SLA/KPI Dashboard, you can view appropriate details by trading partner or mailbox to track SLA and KPI, ensuring business targets are being met. Quickly see the status of data flows in relation to key performance metrics that you assign in order to improve the management of file movement and identification of any problems within seconds.

Create Custom Reports

While Cleo Dashboards come with a variety of standard reports, you can also customize reports to ensure that you have access to reports that mean the most to you and your business.

Move View Act™

Most integration solutions in the marketplace focus exclusively on moving the data. Cleo solutions provide you with the added ability to enable the right people to view timely information and then act more quickly with data-driven business decisions ahead of the competition. You can monitor and track performance metrics from both an IT and business perspective, as well as act on data via reports and dashboards based on your business needs. Leadership in today's information-overload mode of business requires the ability to quickly filter the right information, detect changing conditions, and predict outcomes. By putting Move View Act™ power to work in your company, you are enabling faster and more informed decision-making to be a critical success factor.

Visibility is key when companies are looking to expand or grow their business. By enabling you to view and act on the critical data moving through your business, Cleo Dashboards help companies increase organizational efficiency, lower total cost of ownership (TCO), and improve business responsiveness.

To put the power of a Move View Act™ solution to work for your integration needs, visit cleo.com.
