

# *Cleo* System Monitor™

## **Ensure the Health of Your Business**

The performance of any business is directly tied to the performance of its system infrastructure. When systems or processes are down, data does not move and your business stops running. In order to be proactive, you need tools that enable you to both view and act on all issues associated with the technology that powers the data flows, and in turn powers your business.

The financial impact of downtime ranges from \$25,000 to \$150,000 per hour according to leading industry analysts. With Cleo System Monitor, you can minimize the cost, time, and risk of system downtime while ensuring your environment is continuously on and secure.

## Monitoring Made Easy

With Cleo System Monitor, tracking the health of your system performance can be easier and more thorough than ever before. Track your Cleo infrastructure in a simple-to-understand web interface. Identify issues and capacity constraints before they impact your business. Cleo System Monitor enables you to monitor critical systems in real-time, proactively alerts you based on specific systems criteria, and tracks historical activity to ensure you are always operating at peak efficiency.

- **Monitor Day-to-Day Operations** – Track key statistics, including memory, system uptime, system queues, transfer rates, storage, thread counts, and CPU usage in real time. Additionally, track historical events to ensure that your systems are tracking for peak efficiencies for all levels of data traffic.
- **Monitor Active Connections** – Whether you are running a single instance or multiple instances of Cleo solutions, see all active connections in your environment via a single snapshot.
- **Monitor Synchronization** – View all of the synchronization statuses between instances of Cleo solutions.
- **Monitor Scheduling Information** – Quickly view schedule transfers; cycle times; and active, inactive, and idle actions (events within the processing of data). Monitor your database payload and connection. Monitor router status, total routes, active routes, and pending routes. See the total number of autorun, command lines, interactive router, and scheduled jobs.
- **Monitor Active Users** – Track the number of users connected to Cleo solutions at any point in time.
- **Report Writer** – Create customized reports for end-to-end visibility based on multiple data sources.

For today's business environment, 100% uptime has become the expectation rather than the goal. Ensure that your systems are always on by proactively monitoring the health of the system supporting the data flows that run your business.

## Harness the Power of Move View Act™

Most integration solutions in the marketplace focus exclusively on moving the data. Cleo solutions provide you with the added ability to enable the right people to view timely information and then act more quickly with data-driven business decisions ahead of the competition. Monitor and track system performance metrics, as well as act on data via reports and dashboards based on your business needs. Leadership in today's information-overload mode of business requires the ability to quickly filter the right information, detect changing conditions, and predict outcomes. By putting Move View Act™ power to work in your company, you are enabling faster and more informed decision-making to be a critical success factor.
